

# Ice Task 2

## Main question

In which ways could security techniques be effectively integrated into the software development lifecycle for the web banking applications in South Africa?

## Sub-questions

- A. In the web banking applications, what are the most common security vulnerabilities?
- B. Which security techniques are most effective for the software development lifecycle in its different stages?
- C. What are the challenges that the South African banks face when it comes to implementing secure software development lifecycle techniques?

## Objectives

- 1. Identification of the common security vulnerabilities in web banking applications.  
Tool: case study analysis and literature review.
- 2. To get security techniques used effectively for software development lifecycle in its different stages.  
Tool: review industry reports and academic journals.
- 3. To find challenges that the South African banks face when it comes to implementing secure software development lifecycle.  
Tools: questionnaires or online surveys sent to IT professionals.
- 4. Evaluation of the effectiveness of integrating security techniques into the software development lifecycle.  
Tools: compare existing research studies.
